

FEATURES & BENEFITS

- Rapid Vehicle Inventory Counts
- Accurate plate reads regardless of time of day or lighting conditions
- Pinpoint “Lost Vehicle” Location
- Reduces Revenue Fraud and allows Performance of Occupancy Studies
- GPS Mapping feature

IZParking-Mobile System Interface

IZPARKING-MOBILE VEHICLE INVENTORY SYSTEM presents the best combination of speed and accuracy in automated parking lot inventory management in the world. As the acknowledged vehicle identification solution standard for vehicle inventory by license plate recognition, **INEX/ZAMIR'S IZPARKING-MOBILE SYSTEM** is the complete solution every vehicle inventory operation needs for revenue fraud reduction.

The **IZPARKING-MOBILE SYSTEM** provides management a complete vehicle historical profile – when it entered the facility, how long it has been in the facility and where within the facility it is located – preventing ticket swapping or “lost ticket” scams.

Mounted in a roving vehicle, the **IZPARKING-MOBILE SYSTEM** automatically captures and builds an inventory of all vehicles onsite. Each license plate is captured, read, and stored in a database in the **IZVDPU MOBILE SYSTEMS PROCESSOR** mounted in the roving vehicle. At any point during collection, the operator can view and edit captured data. The roving vehicle follows a set route throughout the lot, and can monitor any size parking facility, including airport parking lots or large event facilities.

Audible or visual alerts inform the operator of vehicles of interest, including stolen vehicles or those that have been onsite for excessive time periods. All inventory data from plate reads, including plate number and location by lot, section and row, can be uploaded to a central database for storage, queries and reporting.

Let us know how INEX/ZAMIR can help your organization with your parking inventory management needs today.

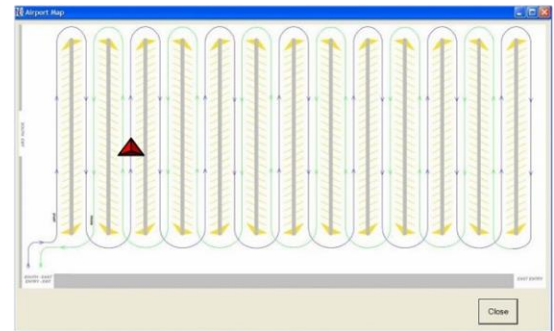

IZParking-Mobile Solution Imagers In Stacked Configuration

The IZParking Mobile Application Interface, shown to the left, provides the operator with an interactive view of the vehicles as the inventory process takes place. The customer can choose to run the application from an existing laptop or through the ruggedized touch screen tablet based display system included with all INEX/ZAMIR Mobile ALPR systems.

Navigating large parking lots with complicated designs can pose a daunting task for inventory management personnel. With the IZParking Mobile solution, preconfigured Route Maps can be stored as JPEG or Bitmap images to be called up within the IZParking Mobile interface by the operator during inventory collection. Built-in GPS mapping shows exact collector vehicle location in real-time, a powerful tool that aids the Operator in traversing the most difficult of lot configurations with speed and efficiency, while also helping to improve the Lot Operation's bottom line.

IZPARKING MOBILE SYSTEM COMPONENTS

	IZM500 Series Imager	<ul style="list-style-type: none"> ✔ Synchronized, Pulsed Illumination Built-in ✔ 2nd Video Stream Allows NVR/DVR Recording ✔ Up To 50 Ft Illumination Distance
	IZVDPU Mobile Data Processor Unit	<ul style="list-style-type: none"> ✔ Up To (2) IZM500 Imager Connections ✔ Windows Embedded Operating System ✔ 8" x 3" x 2" Chassis, Vehicle Mounted
	IZM-TABLET Mobile User Console	<ul style="list-style-type: none"> ✔ Ruggedized Industrial Tablet, Wireless Connection To IZVDPU ✔ User-Friendly Touch Screen Controls ✔ Screen Size Options: 7" or 10"
	IZParking Mobile Software	<ul style="list-style-type: none"> ✔ GPS Mapping ✔ Variety Of Inventory Reports Built-in ✔ Real-time Watchlist Alerting

ABOUT INEX/ZAMIR

INEX/ZAMIR has been supplying proven ALPR (Automatic License Plate Recognition) / ANPR (Automatic Number Plate Recognition) technology since 1993. We are the resource that organizations around the world turn to for license plate reader cameras and tailored solutions. Using advanced IR (infrared) LED technology, INEX/ZAMIR solutions effectively capture license plate data from passing vehicles in real time at any time, day or night.
