

**The integration between cloud-based INEX TECHNOLOGIES' ALPR IZCLOUD Access Control and RMS Cloud Reservation enables the system to use vehicle license plates as reservation identification to operate gates automatically & receive alerts on unknown vehicles in gateless operations**

The integration of **RMS** cloud-based reservation system with INEX's IZCloud License Plate-based Vehicle Access Control System not only automates access for campground operations, using vehicle license plates for visitor identification, but also enhances security for both gated and gateless operations. This system provides alerts for unrecognized or blacklisted vehicles and facilitates efficient management of visitors and their guests, including receiving notifications for vehicles on the watch list.

The solution would enable visitors to schedule and pay for campground access online, and enter and exit campground facilities during their reserved time without any interaction with campground personnel. To do so, at the time of booking, visitors enter their vehicle's (and trailer's) license plate number into the **RMS Cloud** reservation system. Then the system passes reservation information to INEX's Cloud-based **IZCloud** Access System, which communicates with ALPR cameras installed at the camp's entrances and exits. As the vehicle approaches an entry gate, the license plate is instantly recognized by the **IZCloud** ALPR camera. If the reservation for this license plate is valid, the ALPR camera sends a signal to open the gate. If the plate is not on the list of vehicles with active reservations the gate will not open and the system will send notification message to the management. Moreover, if ALPR cameras are also

installed at the exits, the system can automatically check out visitors at the end of their stay when they leave the premises and notify facility operators of the vehicles that have overstayed their allotted time. The IZCamp also allows operators to grant access rights to the Visitor's guests during specified time-frame and to receive alerts on guests that did not leave on time. In addition, the system allows users to create unlimited number of access lists (vendors, employees, ect.) and to assign time/date entrance rules.

**The RMS** integration with the IZCloud ALPR system creates an efficient, accurate, and reliable solution, enabling management to increase security and operate campground entrances/exits without the need for round-the-clock staffing.

### Cloud-Based & Stand-Alone:

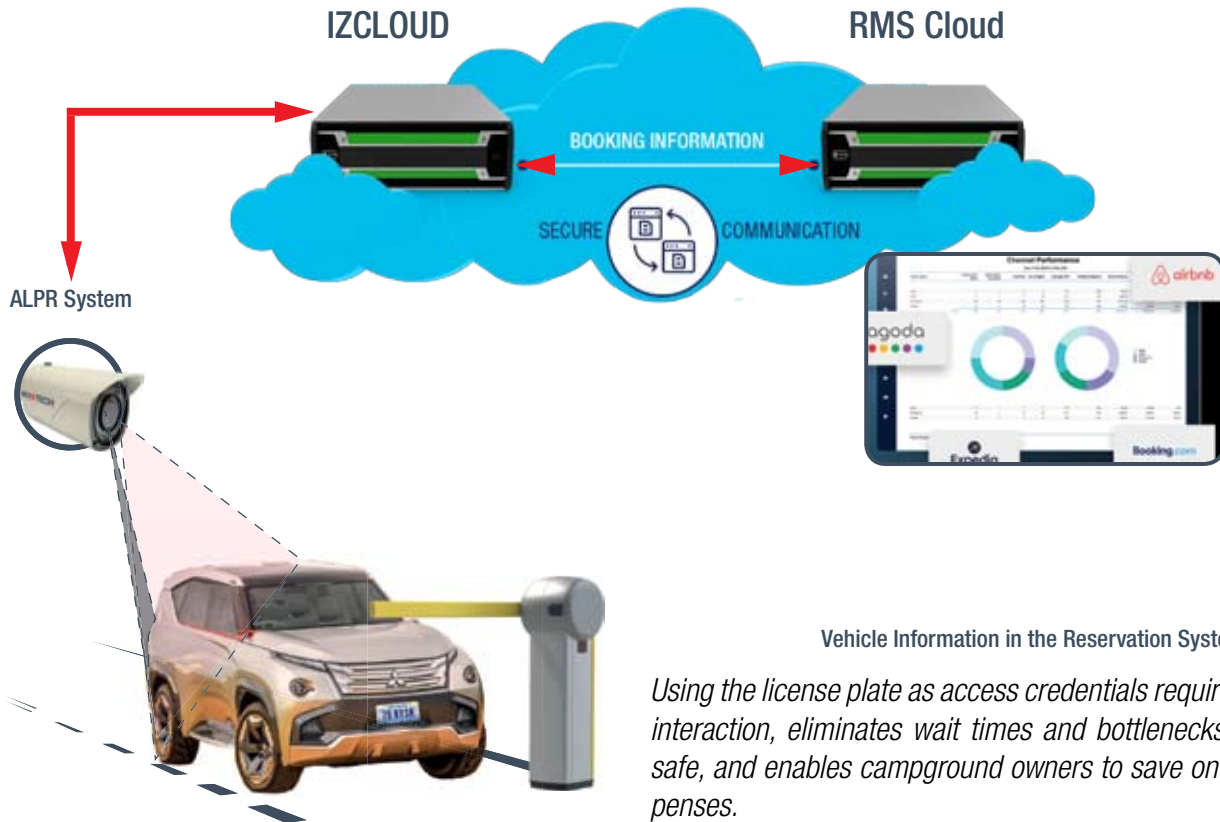

Access rights database replicates between the cloud and edge devices so ALPR system will continue to function even if connection to the cloud is lost.

### Features:

- ✓ Gated & gateless operation: Security & Forensics
- ✓ Integrates with Inex's door & gate pincode locks
- ✓ Security reporting and watch lists
- ✓ Automatic check-out
- ✓ Reports on overstayed vehicles
- ✓ Visitors' guests vehicle identification

## RMS RESERVATIONS & INEX TECHNOLOGIES IZCLOUD ALPR

Vehicle Information in the Reservation System

Using the license plate as access credentials requires no personnel interaction, eliminates wait times and bottlenecks, keeps people safe, and enables campground owners to save on operational expenses.

## IZCLOUD ALPR SYSTEM COMPONENTS & SOFTWARE

IZ600FJ CAMERA SYSTEM

- ❑ IZ600FJ Bullet ALPR Camera: Autoswitch (OV and LPR), with a small DPU unit, and ALPR software
- ❑ DPU: Real Time ALPR Engine with less than 1/4 of a second plate processing time
- ❑ Multiple IR Flash Technology: Enables the camera to capture multiple plate images, ensuring the highest quality photo, in all lighting and weather conditions
- ❑ Multiple Camera Systems can be deployed

IZCLOUD FOR RMS Cloud

- ❑ Integrates with Inex' Door and Gate Pin-Code/Fab/QR-Code Locks
- ❑ Enables RMS Cloud users to open gates with License Plates
- ❑ Easy Set-up with Existing RMS Cloud Reservation System
- ❑ Part of the full line of Inex's Access Control Offerings (Door & Gate Locks) Managed from one IZCloud Platform

## ABOUT INEX TECHNOLOGIES

INEX TECHNOLOGIES has been supplying proven ALPR (Automatic License Plate Recognition) / ANPR (Automatic Number Plate Recognition) technology since 1993. We are the resource that organizations around the world turn to for license plate reader cameras and tailored solutions. Using advanced IR (infrared) LED technology, our solutions effectively capture license plate data from passing vehicles in real time at any time, day or night.

For further information about the INEX TECHNOLOGIES' IZCamp solution, and all of our other system components and solutions, please contact [info@inextechnologies.com](mailto:info@inextechnologies.com).
