

IZCloud-PARK for Parking Management Solution Overview

Key Features and Benefits

- ✓ Transaction management - matching entry and exit vehicle reads, ensuring accurate tracking of parking usage and duration
- ✓ Data reconciliation - integrates parking inventory data to provide parking space usage and availability information
- ✓ Real-time vehicle tracking - maintains a live list of vehicles in all parking lots
- ✓ Scheduled pre-generated downloadable reports - for convenient analysis
- ✓ Assignable user roles - for specific edit/viewing permissions

Inex IZCloud-PARK is a modular, cloud-based suite of ALPR services. It provides a comprehensive approach to parking lot management and vehicle tracking. With input from fixed ALPR cameras, roving vehicles with mounted cameras, and handheld devices, vehicle entries/exits and parking lot inventories are all included in one system. Vehicle and plate images, and other data such as state, are uploaded to IZCloud-PARK to provide a complete current and historical record of parked vehicles.

IZCloud-PARK provides real-time and scheduled pre-generated downloadable reports, including:

- All LPR Events from all cameras (mobile/handheld and entry/exit)
- Plate and state read confidences plus suspected mistakes
- List of scan files uploaded from all mobile cameras/handheld devices
- Parking transaction details per vehicle (entry, exit, detections during inventory scans)
- Vehicles that have reappeared, disappeared or have been parked too long (aged)
- Parking fees for each vehicle

Detailed Transaction Steps
